Engine Testing: Theory and Practice brings together the information on both the theory and practice of engine testing that engineers in this field must have available. Organized into 19 chapters, this book begins with a description of the engine test cell, including the salient features of its main types. Subsequent chapters deal with the other main components of an engine testing installation: the control room and the ventilation systems. Other chapters discuss the essential features of a test installation fuel supply system, as well as the characteristics, advantages, and disadvantages of the various types of dynamometer. The measurements of torque, power, speed, fuel consumption, air consumption, heat loss, and mechanical loss are also explained. Other topics of significance include the process of combustion, exhaust emissions, data logging, and statistical analysis. This material will be very useful to practicing test engineers and students.

There is a growing desire to install electronic power and control systems in high temperature harsh environments to improve the accuracy of critical measurements, reduce the amount of cabling and to eliminate cooling systems. Typical target applications include electronics for energy exploration, power generation and control systems. Technical topics presented in this book include: High temperature electronics market High temperature devices, materials and assembly processes Design, manufacture and testing of multi-sensor data acquisition system for aero-engine control Future applications for high temperature electronics High Temperature Electronics Design for Aero Engine Controls and Health Monitoring contains details of state of the art design and manufacture of electronics targeted towards a high temperature aero-engine application. High Temperature Electronics Design for Aero Engine Controls and Health Monitoring is ideal for design, manufacturing and test personnel in the aerospace and other harsh environment industries as well as academic staff and master/research students in electronics engineering, materials science and aerospace engineering.
