Written by outstanding authorities from all over the world, this comprehensive new textbook on pediatric and neonatal ventilation puts the focus on the effective delivery of respiratory support to children, infants and newborns. In the early chapters, developmental issues concerning the respiratory system are considered, physiological and mechanical principles are introduced and

Read Book Acutronic Fabian Ventilator Hfo User

airway management and conventional and alternative ventilation techniques are discussed. Thereafter, the rational use of mechanical ventilation in various pediatric and neonatal pathologies is explained, with the emphasis on a practical step-by-step approach. Respiratory monitoring and safety issues in ventilated patients are considered in detail, and many other topics of interest to the bedside clinician are covered, including the ethics of withdrawal of respiratory support and educational issues. Throughout, the text is complemented by numerous illustrations and key information is clearly summarized in tables and lists.

and advanced respiratory management of neonates: general principles and concepts; assessment, diagnosis and monitoring methods; therapeutic respiratory interventions; adjunctive interventions; and special situations and outcomes. Provides updated content on rapidly changing technology and guidelines for assisted ventilation, with up-to-date descriptions of bedside methodologies and the rationale for providing all types of ventilator care in infants. Contains new chapters on respiratory gas conditioning, diagnosis and management of PPHN, care of the infant with CDH, gaps in knowledge, and future directions. Includes significant updates on cardiovascular assessment and

tion falls largely into the domain of the anaesthetist. However, an anaesthetist is not always instantly available and resuscitation has to be initiated by those in other specialities who have had little or no formal training in resuscitation techniques. The purpose of this book is to guide those involved in resuscitation in the indications and methods of resuscitation. Its creation and contents were stimulated by noting the difficulties encountered in both teaching centres and provincial hospitals. 'Basic' is included in the title to emphasize that, with the exception of 'the acid-base laboratory', the apparatus is simple and available in all hospitals. Furthermore, 'basic' indicates the authors' intention to limit their discussion on
