The Organisation for Economic Co-operation and Development (OECD) is one of the least written about and least understood of our major global institutions. This new book builds a well-rounded understanding of this crucial, though often neglected, institution, with a range of clearly written chapters that: outline its origins and evolution, bringing its story fully up-to-date present a clear framework for understanding the OECD set the institution within the broader context of global governance outline key criticisms and debates evaluate its future prospects. Given the immense challenges facing humanity at the start of the 21st century, the need for the OECD as a venue where the world's leading states can discuss, on an informal and ongoing basis, the conundrums of globalization has never been greater. The clarity and rigour of these chapters cut through the layers of misunderstanding and misconception that surround the OECD, often dismissed as a 'rich-man's club', 'a think-tank' and 'a consultative forum'. This new book dismantles these labels to provide a holistic understanding of the organization. This concise and accessible introduction is essential reading for all students of international relations, politics and world history and affairs.

This title addresses the most important aspect of anaesthetic training - learning in the operating suite. The information is clearly presented and can be easily incorporated into the practice of clinical anaesthesia. The practical guidance provided, from organising the department, assessing competence, teaching practical procedures or organising simulator sessions, is based on many years of experience. There are chapters devoted to the issues of portfolio-based training and the use of mentoring and appraisal. The place, and effective use, of medical simulation, either low fidelity systems in local hospitals or the high fidelity centres in major educational units, is clarified by an international team of experts.

This book demonstrates how Clausewitzian thought influenced American strategic thinking between the Vietnam War and the current conflict in Iraq. Carl von Clausewitz's thought

played a part in the process of military reform and the transition in US policy that took place after the Vietnam War. By the time of the 1991 Gulf War, American policy makers demonstrated that they understood the Clausewitzian notion of utilizing military force to fulfil a clear political objective. The US armed forces bridged the operational and strategic levels during that conflict in accordance with Clausewitz's conviction that war plans should be tailored to fulfil a political objective. With the end of the Cold War, and an increasing predilection for technological solutions, American policy makers and the military moved away from Clausewitz. It was only the events of 11 September 2001 that reminded Americans of his intrinsic value. However, while many aspects of the 'War on Terror' and the conflict in Iraq can be accommodated within the Clausewitzian paradigm, the lack of a clear policy for countering insurgency in Iraq suggests that the US may have returned full circle to the flawed strategic approach evident in Vietnam. Clausewitz and America will be of great interest to students of strategy, military history, international security and US politics.

This book explores the ideas of key thinkers and media practitioners who have examined images and icons of war and terror. *Icons of War and Terror* explores theories of iconic images of war and terror, not as received pieties but as challenging uncertainties; in doing so, it engages with both critical discourse and conventional image-making. The authors draw on these theories to re-investigate the media/global context of some of the most iconic representations of war and terror in the international 'risk society'. Among these photojournalistic images are: Nick Ut's Pulitzer Prize winning photograph of a naked girl, Kim Phuc, running burned from a napalm attack in Vietnam in June 1972; a quintessential 'ethnic cleansing' image of massacred Kosovar Albanian villagers at Racak on January 15, 1999, which finally propelled a hesitant Western alliance into the first of the 'new humanitarian wars'; Luis Simco's photograph of marine James Blake Miller, 'the Marlboro Man', at Fallujah, Iraq, 2004; the iconic toppling of the World Trade Centre towers in New York by planes on September 11, 2001; and the 'Falling Man' icon - one of the most controversial images of 9/11; the image of one of the authors of this book, as close-up victim of the 7/7 terrorist attack on London, which the media quickly labelled iconic. This book will be of great interest to students of media and war, sociology, communications studies, cultural studies, terrorism studies and security studies in general.

Xinjiang, the nominally autonomous region in China's far northwest, is of increasing international strategic and economic importance. With a population which is mainly non-Chinese and Muslim, there are powerful forces for autonomy, and independence, in Xinjiang. This book provides a comprehensive overview of Xinjiang. It introduces Xinjiang's history, economy and society, and above all outlines the political and religious opposition by the Uyghur and other Turkic peoples of Xinjiang to Chinese Communist rule.

This volume develops information strategy as a construct equal in importance to military strategy as an influential tool of statecraft. John Arquilla and Douglas A. Borer explore three principal themes: the rise of the 'information domain' and information strategy as an equal partner alongside traditional military strategy the need to consider the organizational implications of information strategy the realm of what has been called 'information operations' (IO) - the building blocks of information strategy - has been too narrowly depicted and must be both broadened and deepened. *Information Strategy and Warfare* will be essential reading for students and practitioners of information strategy, as well as scholars of security studies and military strategy in general.

Every year, the U.S. Army must select from an applicant pool in the hundreds of thousands to meet annual enlistment targets, currently numbering in the tens of thousands of new soldiers. A critical component of the selection process for enlisted service members is the formal assessments administered to applicants to determine their performance potential. Attrition for the U.S. military is hugely expensive. Every recruit that does not make it through basic training or beyond a first enlistment costs hundreds of thousands of dollars. Academic and other professional settings suffer similar losses when the wrong individuals are accepted into the wrong schools and programs or jobs and companies. Picking the right people from the start is becoming increasingly important in today's economy and in response to the growing numbers of applicants. Beyond cognitive tests of ability, what other attributes should selectors be considering to know whether an individual has the talent and the capability to perform as well as the mental and psychological drive to succeed? *Measuring Human Capabilities: An Agenda for Basic Research on the Assessment of Individual and Group Performance Potential for Military Accession* examines promising emerging theoretical, technological, and statistical advances that could provide scientifically valid new approaches and measurement capabilities to assess human capability. This report considers the basic research necessary to maximize the efficiency, accuracy, and effective use of human capability measures in the military's selection and initial occupational assignment process. The research recommendations of *Measuring Human Capabilities* will identify ways to supplement the Army's enlisted soldier accession system with additional predictors of individual and collective performance. Although the primary audience for this report is the U.S. military, this book will be of interest to researchers of psychometrics, personnel selection and testing, team dynamics, cognitive ability, and measurement methods and technologies. Professionals interested in of the foundational science behind academic testing, job selection, and human resources management will also find this report of interest.
