Trauma surgery has increasingly become a specialized field inspired by different principles and philosophy. A good trauma surgeon is a surgeon who knows how to perform abdominal vascular, thoracic, urologic, gynecologic, and orthopaedic procedures and is able to repair multiple traumatic injuries in the best sequence possible. In this first volume, practical, up-to-date guidance is provided on the optimal critical care and ICU management of trauma patients. In addition, individual chapters focus on specific injuries in orthopaedic trauma (and especially spinal trauma) and neurotrauma, with the aim of providing a fresh view of the surgical approach and practical suggestions for improving the skills of treating surgeons. Educational issues and the organization of a trauma center are also covered. The volume will be a handy pocket guide for trainee surgeons and any surgeon, physician, or nurse who treats trauma patients. It will be particularly relevant for emergency department physicians, critical care and ICU doctors, orthopaedic surgeons, neurosurgeons, and professionals responsible for trauma care and decision making, programs of trauma education, or organization of a trauma center. Also available: Trauma Surgery Vol. 2: Thoracic and Abdominal Trauma

Includes the college's Hospital standardization report.

valuable way of presenting information within the book and purposely sought. It is hoped that exposure to individual chapters within the book will encourage readers to consider issues and problems from perspectives other than the ones with which they are familiar and perhaps comfortable. The reader is then responsible for the consideration, adoption or challenge to the content of any chapter. During the process of exploration of content, reference should always be made to its potential place within clinical practice and its influence upon the delivery of patient and family care. Although it is acknowledged that each A and E department is different and that the environment and local resources affect the translation of theory into practice, questioning and subsequent challenge of the environment, work issues and ideas should help the reader to widen the debate about nursing in A and E and its anticipated growth into the next century. The intended outcome of such analysis by the reader may be to challenge practice. Alternatively information presented within the book may support or enhance work currently being undertaken within a number of A and E departments. With reference to the format, the book is not intended to be read from cover to cover. Instead the reader will find the book a valuable source of information that can be dipped into when required, a book where the sampling of arguments put forward by various

contributors can be considered.

"Enhance your airway management skills and overcome clinical challenges with Benumof and Hagberg's! This one-of-a-kind resource offers expert, full-color guidance on preintubation and postintubation techniques and protocols, from equipment selection through management of complications."--Back cover.

This edition of Bouncebacks! Emergency Medicine books examines the bounceback visit, putting the reader in the footsteps of the clinician as the patient deteriorates. The story pauses at important decision points as possible management strategies are reviewed in a literature-based fashion, followed by a revelation of the path chosen by the actual provider. As the patient's course progresses, we reach additional decision points and address further clinical questions. In addition to our chapter authors, many with expertise in critical care emergency medicine, we have an all-star lineup of expert-whisperers: first an EM/critical care section editor (below) and second, EMCRI.org's double-boarded critical care guru, Scott Weingart. Their comments are inserted in grey boxes and are intended to give tips and tricks borne of experience and to provide context to the literature, "as if" they are standing over our shoulder and advising during a resuscitation. Additionally, there are three chapters where we address the medical-legal aspects of care. Enter Greg Henry MD, past president of The American College of Emergency Physicians (ACEP) and one of the most experienced physician medical-legal experts in the country. He opines on the approach that both the defense and plaintiff would likely pursue and, by extension, how we can make patients safer through our evaluation and documentation before there is an adverse outcome. Whereas, these chapters contain the actual documentation from the ED chart, a very few chapters have slight modifications to the final aspects of the return visit at decision point 3, to allow for exploration of different critical care scenarios. There is still plenty

of commentary on the documentation, missed red-flags, and what could have been done to improve care at the initial visit. Our goal is to make each chapter challenging, dynamic, and realistic... to move us from "standard of care" to "excellence in care." Book Review: "It's back, it's Bouncebacks! One of the mostly widely read and highly regarded education series in all of Emergency Medicine. Clinicians fear the medical malpractice landscape, but Mike Weinstock and the team give you all the tools you need to protect yourselves. Documentation people, documentation. Now with a critical care version. Read this book, sleep better at night, as simple as that! Love, love this series!" -- Mel Herbert, MD, MBBS, BMedSci, FACEP, FAAEM Professor of Emergency Medicine at the Keck School of Medicine LAC + USC Medical Center, Owner and Editor of EM: RAP
