Author John Pinel and his artist/designer wife, Maggie Edwards, created many of these illustrations exclusively for this text. While some biopsychological textbooks emphasize neurophysiology, neurochemistry, and neuroanatomy, Biopsychology gives top billing to coverage of behavioral research. The authors stress that neuroscience is a team effort and that the unique contribution made by biopsychologists to this effort is their behavioral expertise.

Written in a friendly and engaging manner, Pinel's Biopsychology introduces the fundamentals of modern biopsychology. The fourth edition has been thoroughly updated to keep Biopsychology abreast of the many recent developments in this rapidly changing field. Despite the significant infusion of new material, Pinel's text continues the tradition that has made it such a success: clear, engaging prose; an unwavering emphasis on behavior; an attractive, superbly designed and integrated illustration package; and insight-provoking accounts of modern biopsychological research.

For courses in Physiological Psychology and Biopsychology. A student-focused approach to how the central nervous system governs behaviour Biopsychology, 11th Edition presents a clear, engaging introduction to the discipline through a unique combination of biopsychological science and personal, reader-oriented discourse. Addressing students directly, authors John Pinel and Steven Barnes interweave the fundamentals of the field with clinical case studies, social issues, personal implications, useful metaphors, and memorable anecdotes. The 11th Edition incorporates two new emerging themes ("thinking about epigenetics" and "consciousness") and includes up-to-date coverage of recent developments in the field.

How do animals perceive the world, learn, remember, search for food or mates, communicate, and find their way around? Do any nonhuman animals count, imitate one another, use a language, or have a culture? What are the uses of cognition in nature and how might it have evolved? What is the current status of Darwin's claim that other species share the same "mental powers" as humans, but to different degrees? In this completely revised second edition of Cognition, Evolution, and

Behavior, Sara Shettleworth addresses these questions, among others, by integrating findings from psychology, behavioral ecology, and ethology in a unique and wide-ranging synthesis of theory and research on animal cognition, in the broadest sense--from species-specific adaptations of vision in fish and associative learning in rats to discussions of theory of mind in chimpanzees, dogs, and ravens. She reviews the latest research on topics such as episodic memory, metacognition, and cooperation and other-regarding behavior in animals, as well as recent theories about what makes human cognition unique. In every part of this new edition, Shettleworth incorporates findings and theoretical approaches that have emerged since the first edition was published in 1998. The chapters are now organized into three sections: Fundamental Mechanisms (perception, learning, categorization, memory), Physical Cognition (space, time, number, physical causation), and Social Cognition (social knowledge, social learning, communication). Shettleworth has also added new chapters on evolution and the brain and on numerical cognition, and a new chapter on physical causation that integrates theories of instrumental behavior with discussions of foraging, planning, and tool using.

The 7th edition of this best-selling social psychology text by Graham Vaughan and Michael Hogg, *Social Psychology*, retains the structure and approach of the previous edition but has been revised to reflect the changes in the field, with the material thoroughly updated throughout. *Social Psychology 7e* continues to capture the scope and detail of contemporary social psychology as an international scientific enterprise and at the same time deals with the subject in a way that is relevant to university teaching and social psychology research in Australia and New Zealand. *Social Psychology 7e* is accompanied by MyPsychLab, an interactive online study resource to consolidate and further students' understanding. Together, the book and online resources make this an ideal resource for those studying the subject for the first time.

Pinel's textbook presents the fundamentals of the study of the biology of behaviour and makes the topics personally and socially relevant to the student. A key feature of 'Introduction to Biopsychology' is its combination of biopsychological science and personal, reader-oriented discourse.
