The automotive industry is one of the most environmental aware manufacturing sectors. Product take-back regulations influence design of the vehicles, production technologies but also the configuration of automotive reverse supply chains. The business practice comes every year closer to the closed loop supply chain concept which completely reuses, remanufactures and recycles all materials. The book covers the emerging environmental issues in automotive industry through the whole product life cycle. Its focus is placed on a multidisciplinary approach. It presents viewpoints of academic and industry personnel on the challenges for implementation of sustainable police in the automotive sector

This revised edition of Taylor's classic work on the internal-combustion engine incorporates changes and additions in engine design and control that have been brought on by the world petroleum crisis, the subsequent emphasis on fuel economy, and the legal restraints on air pollution. The fundamentals and the topical organization, however, remain the same. The analytic rather than merely descriptive treatment of actual engine cycles, the exhaustive studies of air capacity, heat flow, friction, and the effects of cylinder size, and the emphasis on application have been preserved. These are the basic qualities that have made Taylor's work indispensable to more than one generation of engineers and designers of internal-combustion engines, as well as to teachers and graduate students in the fields of power, internal-

combustion engineering, and general machine design.

Offers state-of-the-art information on all the major synthetic fluids, describing established products as well as highly promising experimental fluids with commercial potential. This second edition contains chapters on polyinternalolefins, polymer esters, refrigeration lubes, polyphenyl ethers, highly refined mineral oils, automotive gear oils and industrial gear oils. The book also assesses automotive, industrial, aerospace, environmental, and commercial trends in Europe, Asia, South America, and the US.

Explores the underlying assumptions of environmental studies and the need for a new paradigm for understanding our world. Transforming the Dream challenges American mainstream culture's obsession with unlimited economic and industrial growth. Drawing on works by Roy Morrison, Murray Bookchin, Daniel C. Maguire, Paul Taylor, C. A. Bowers, and others, Bednar critiques the ideological status quo, offering an alternative ecological economics, political economy, ethics, and pedagogy. This new outlook on humankind's relationship to the environment is, he argues, better positioned to address critical issues of the twenty-first century, including the ecological and social limits of economic growth, the social and economic requisites for authentic democracy, the ethics of human interaction with the natural environment, and the educational curricula and practices required to promote ecological literacy. Bednar's perspective provides the

opportunity to develop economic and political institutions that permit a sustainable relationship with the environment and offers a socially richer and more fulfilling life for the individual than the “American Dream” promised by the current system. Charles Sokol Bednar is Professor Emeritus of Political Science at Muhlenberg College.
