If you want to know whether evolution is a science, how life began, what Charles Darwin really said about evolution, why a fungus is more closely related to humans than to a plant, how experiments in evolution can be carried out, why birds are flying dinosaurs, how we manipulate the evolution of other species, and if you want a clear treatment of the processes that result in evolution, then this is the book for you! Written for those with a minimal science background, *Evolution: Principles and Processes* provides a concise introduction of evolutionary topics for the one-term course. Using an engaging writing style and a wealth of full-color illustrations, Hall covers all topics from the origin of universe, Earth, the origin of life, and on to how humans influence the evolution of other species. He brings together the principles and processes that explain evolutionary change and discusses the patterns of life that have resulted from the operation of evolution over the past 3.5 billion years. This overview, coupled with numerous case studies and examples, helps readers understand and truly appreciate the origin and diversity of life.

Dr. Miklos Nyiszli, an imprisoned doctor in the Auschwitz camp, wrote that Nazi doctors hoped studying twins would solve the problem of faster reproduction of superior races. Nazis hoped to have each German mother bear as many twins as possible. What Darwin influenced went far beyond the Nazi death camps: Shocking political, social, and scientific legacies of Darwin and his family. Disturbing disclosure of how over 45 million Christians were killed in the 20th century because of their faith. Revealing and layman-friendly presentation. This book is the result of 30 years of research and study carefully documenting the common destructive threads that tie some of history's most murderous dictators, uncaring capitalists, and aggressive social activists to the flawed concepts of Charles Darwin in an effort to change the world – and how they succeeded. The extermination of races considered “lower” than others, the profound lack of empathy for less-advanced cultures, the corrupted atheistic justifications for taking the lives of millions – all done to advance the agendas of social Darwinism at work in the world today. More than mere theoretical discussions, we have seen the horrifying evidence of the practical results when applying these destructive and misleading concepts to society in the last 100 years!

An incisive study of the development of the biological sciences chronicles the origins, maturation, and modern views of the

classification of life forms, the evolution of species, and the inheritance and variation of characteristics

Charles Darwin did not deliberately set out to be the “destroyer of mythical beliefs,” some of which, in his early days as a young Christian, he had previously espoused. He was a modest man who liked to avoid controversy of any kind, yet paradoxically, he was to be the cause of the greatest controversy in the history of science and religion. When Darwin embarked on the HMS Beagle in late December 1831, bound for the southern hemisphere, he could not have imagined that the experience would lead him to formulate a theory which would totally revolutionize the way in which we viewed the natural world. He did not come to his conclusions about the origin and evolution of all life on Earth quickly, though, for just as the living organisms to which his theory applied had evolved over millions of years, so his thinking evolved as his own life progressed. How did this thoughtful, methodical scientist come to have such an impact on his time—and on ours? These questions and more are what Andrew Norman seeks to answer in this biography of the author of *The Origin of Species*. Skyhorse Publishing, along with our Arcade, Good Books, Sports Publishing, and Yucca imprints, is proud to publish a broad range of biographies, autobiographies, and memoirs. Our list includes biographies on well-known historical figures like Benjamin Franklin, Nelson Mandela, and Alexander Graham Bell, as well as villains from history, such as Heinrich Himmler, John Wayne Gacy, and O. J. Simpson. We have also published survivor stories of World War II, memoirs about overcoming adversity, first-hand tales of adventure, and much more. While not every title we publish becomes a New York Times bestseller or a national bestseller, we are committed to books on subjects that are sometimes overlooked and to authors whose work might not otherwise find a home.

*Charles Darwin: The Founder of the Theory of Evolution and Natural Selection* provides a comprehensive coverage of the whole spectrum of the theory of evolution. The title presents the historical accounts and conceptual basis that leads to the foundation of the theory of evolution. The text first covers the history of the theory of evolution; the book also details the early form of the theory up to the point of the theories acceptance. Next, the selection discusses the basis and development of theory of evolution. The book will be of great interest to anyone who wants to investigate in great depth the theory of evolution.

*Without Miracles* describes many remarkable examples of the fit of various structures, behaviors, and products of living organisms to their environments in a broad synthesis of humankind's attempt to understand the emergence of complex, adapted entities.
