Through the prisms of a data scientist, a patent attorney, and a designer, this book demystifies the complexity of patent data and its structure and reveals their hidden connections by employing elaborate data analytics and visualizations using a network map. This book provides a practical guide to introduce and apply patent network analytics and visualization tools in your business. We incorporate case studies from renowned companies such as Apple, Dyson, Adobe, Bose, Samsung and more, to scrutinise how their underlying values of patent network drive innovation in their business. Finally, this book advances readers' perspective of patent gazettes as big data and as a tool for innovation analytics when coupled with Artificial Intelligence.

A human-inspired, linguistically sophisticated model of language understanding for intelligent agent systems. One of the original goals of artificial intelligence research was to endow intelligent agents with human-level natural language capabilities. Recent AI research, however, has focused on applying statistical and machine learning approaches to big data rather than attempting to model what people do and how they do it. In this book, Marjorie McShane and Sergei Nirenburg return to the original goal of recreating human-level intelligence in a machine. They present a human-inspired, linguistically sophisticated model of language understanding for intelligent agent systems that emphasizes meaning--the deep, context-sensitive meaning that a person derives from spoken or written language.

This cutting-edge Handbook takes stock of a diverse set of theoretical and methodological perspectives that address creativity, innovation, and the ways in which they intersect. Considering the development of the field, the Handbook examines current trends to chart a path forward for promising future research.

"Addressing the critical issue of knowledge transfer within an organization, this book offers practical advice on how to structure the transition of documented information and the even more valuable non-documented knowledge that outgoing staffers have-before it leaves with them. Whether a result of a retirement, an acquisition, promotions, transfers, or layoffs-all organizations have lost what these authors call "deep smarts" when workers leave. Now, Dorothy Leonard and Walter Swap, coauthors of the popular Deep Smarts, and their coauthor Gavin Barton offer a solution. The trio has constructed a new approach that not only helps organizations put in place the structures and practices to pass along knowledge from expert to successor, but also identifies tacit knowledge-knowledge that is largely undocumented and lives inside of people's heads. Based on theory and research, this book offers a variety of examples, tools, and templates to take action before essential knowledge disappears"--
