Pseudo-static analysis is
still the most-used
method to assess the

stability of geotechnical systems that are exposed to earthquake forces.

However, this method does not provide any

information about the deformations and permanent

displacements induced by seismic activity.

Moreover, it is questionable to use this approach when geotechnical systems

are affected by frequent and rare seismic events. Incidentally, the peak ground acceleration has increased from 0.2-0.3 g in the seventies to the current value of 0.6-0.8 g. Therefore, a shift from the pseudo-static approach to performance-based analysis is needed. Over the past five years considerable progress

In the following 3 Parts of the book the EGED for different geotechnical systems is presented as follows: the design of levees and dams including natural slopes in Part III; the design of foundations and soil structure interaction analysis in Part IV; underground structures

in Part V. Finally in Part VI, new topics like the design of reinforced earth retaining walls and landfills are covered.

With the encroachment of the Internet into nearly all aspects of work and life, it seems as though information is everywhere. However, there is information and then there is correct,

appropriate, and timely information. While we might love being able to turn to Wikipedia® for encyclopedia-like information or search Google® for the thousands of links on a topic, engineers need the best information, information that is evaluated, up-to-date, and complete. Accurate, vetted information is

necessary when building new skyscrapers or developing new prosthetics for returning military veterans. While the award-winning first edition of *Using the Engineering Literature* used a roadmap analogy, we now need a three-dimensional analysis reflecting the complex and dynamic nature of research in the

information age. Using the Engineering Literature, Second Edition provides a guide to the wide range of resources available in all fields of engineering.

This second edition has been thoroughly revised and features new sections on nanotechnology as well as green engineering.

The information age has

greatly impacted the way engineers find information. Engineers have an effect, directly and indirectly, on almost all aspects of our lives, and it is vital that they find the right information at the right time to create better products and processes. Comprehensive and up to date, with expert chapter authors, this

book fills a gap in the literature, providing critical information in a user-friendly format.
