Kevin Andrew Lynch was an American urban planner and author. His most influential books include *The Image of the City* (1960) and *What Time is This Place?* (1972). Lynch studied at Yale University, Taliesin (studio) under Frank Lloyd Wright, Rensselaer Polytechnic Institute, and received a Bachelor's degree in city planning from MIT in 1947.[1]

A Theory of Good City Form by Kevin Lynch
Kevin Lynch's magnum opus *A Theory of Good City Form* (1981) is well known as a normative theory of the city. The intersection of human purposeful activity and city form is a principal feature. However, little attention is given in the literature to a small appendix in the book, *A Theory of Good City Form* (1981), in which the theories that explain the form and function of the city are classified and reviewed.

Available in paperback under the title *Good City Form* With the publication of *The Image of the City*, Kevin Lynch embarked on the process of exploration of city form. *A Theory of Good City Form*, his most important book, is both a summation and an extension of his vision, a high point from which he views cities past and possible. The central section of the book develops a new normative theory of city form—an identification of the characteristics that good human settlements should possess. This follows an examination of three existing normative theories—those which see the city as a model of the cosmos, as a machine, and as a living organism—which are shown to be finally inadequate and unable to hold up under sustained analysis. In addition, an appendix demonstrates the

inadequacies of a number of functional theories—those whose aim is simply to describe how settlements work rather than to evaluate how they ought to work. Among these theories are models of cities as ecological systems, as fields of force, as systems of linked decisions, or as areas of class conflict. Lynch puts forth his own theory by searching out the qualities that produce good settlements, qualities that allow "development, within continuity, via openness and connection." He identifies five interrelated dimensions of performance—vitality, sense, fit, access, and control—and two "meta-criteria," efficiency and justice. As in all of Lynch's writing, the theory flows from and leads back to specific examples and everyday realities. The final section of the book is concerned with applications of the theory.

The classic work on the evaluation of city form. What does the city's form actually mean to the people who live there? What can the city planner do to make the city's image more vivid and memorable to the city dweller? To answer these questions, Mr. Lynch, supported by studies of Los Angeles, Boston, and Jersey City, formulates a new criterion—imageability—and shows its potential value as a guide for the building and rebuilding of cities. The wide scope of this study leads to an original and vital method for the evaluation of city form. The

architect, the planner, and certainly the city dweller will all want to read this book.

Kevin Lynch's books are the classic underpinnings of modern urban planning and design, yet they are only a part of his rich legacy of ideas about human purposes and values in built form. *City Sense* and *City Design* brings together Lynch's remaining work, including professional design and planning projects that show how he translated many of his ideas and theories into practice. An invaluable sourcebook of design knowledge, *City Sense* and *City Design* completes the record of one of the foremost environmental design theorists of our time and leads to a deeper understanding of his distinctively humanistic philosophy. The editors, both former students of Lynch, provide a cogent summary of his career and of the role he played in shaping and transforming the American urban design profession during the 1950s, the 1960s, and the 1970s. Each of the seven thematic groupings of writings and projects that follow begins with a short introduction explaining their content and their background. The essays in part I focus on the premises of Lynch's work: his novel reading of large-scale built environments and the notion that the design of an urban landscape should be as meaningful and intimate as the natural landscape. In part II, excerpts from Lynch's travel journals reveal his early ideas on how people perceive

and interpret their surroundings—ideas that culminated in his seminal work, *The Image of the City*. This part of the book also presents Lynch's experiments with children and his assessment of environmental-perception research. The examples of both small-scale and large-scale analysis of visual form in part III are followed by three parts on city design. These include Lynch's more theoretical works on complex planning decisions involving both functional (spatial and structural organization) and normative (how the city works in human terms) approaches, articles discussing the principles that guided Lynch's teaching and practice of city design, and descriptions of Lynch's own projects in the Boston area and elsewhere. The book concludes with essays written late in Lynch's career, fantasy pieces describing utopias and offering new design freedoms and scenarios warning of horrifying "cacotopias."

The thesis seeks to formulate an approach to urban design intervention in the walled city of Ahmedabad, by first developing an

Access Free Good City Form Kevin Lynch

understanding of the context. This is to be undertaken by applying the methodological tools suggested by two theories of city form, those of Kevin Lynch's "Theory of Good City Form" and N.J. Habraken's "Concept of Territory" which forms part of the book, "Transformations of the Site." In applying two different theories together to the city, the study endeavors to develop a more comprehensive understanding of the city. The exercise of applying theories to the city, also provides way of evaluating the theories, and their efficacy as methods for observing cities. The observations derived from the application of the theories, may be helpful as a basis for formulating strategies for urban design intervention in the walled city of Ahmedabad.

An environmental philosophy of the contemporary city, this book develops a theory of good urban growth involving both the physical and cultural dimensions of city life.
