“...fascinating. Like Malcolm Gladwell on speed.” —THE GUARDIAN “HERD is a rare thing: a book that transforms the reader's perception of how the world works”. —Matthew D’Ancona, THE SPECTATOR “This book is a must. Once you have read it you will understand why Mark Earls is regarded as a marketing guru.” —Daniel Finkelstein, THE TIMES This paperback version of Mark Earls' groundbreaking and award winning book comes updated with new stats and figures and provides two completely revised chapters that deal with the rise of social networking. Since the Enlightenment there has been a very simple but widely held assumption that we are a species of thinking individuals and human behaviour is best understood by examining the psychology of individuals. It appears, however, that this insight is plain wrong. The evidence from a number of leading behavioural and neuroscientists suggests that our species is designed as a herd or group animal. Mark Earls applies this evidence to the traditional mechanisms of marketing and consumer behaviour, with a result that necessitates a complete rethink about these subjects. HERD provides a host of unusual examples and anecdotes to open the mind of the business reader, from Peter Kay to Desmond Tutu, Apple to UK Sexual Health programmes, George Bush to Castle Lager, from autism to depression to the real explanation for the placebo effect in pharmaceutical testing.

The past decade has revealed unfavourable trends in e.g. fertility, udder health and locomotion in some major dairy cattle breeds due to a large increase in production and insufficient consideration of functional traits in the breeding goals. Such unfavourable trends in some functional traits increase costs. Additionally, the enlargement of herds leads to less available labour time per individual cow. This asks for cows that are easy to handle. At the same time, society is demanding a higher welfare standard of animals. These contradicting developments have increased the desire for so called more robust animals. Robustness can be defined as 'the ability to maintain homeostasis in commonly accepted and sustainable herds of the near future'; or 'the ability of the cow to function well in the environment she lives in as well as in a wide range of climates and production systems'. This book contains a series of articles (26) dealing with the concept of robustness, including aspects like evolution, genetics, environment, animal health and welfare, and integrity. Besides the major functional traits also the links to energy balance, hot climatic conditions, and the attitude and input of stakeholders towards robustness as part of the breeding program are discussed. This book is the first attempt to summarise the available knowledge concerning this topic in cattle, making this book unique. The contributions are from authors of 16 countries from all over the world. However, the focus is presently on farm animal level, while in future robustness of the whole production system may also require additional attention.

Every day, learners use and reuse open, digital resources for learning. Reusing Open Resources offers a vision of the potential of these open, online resources to support learning. The book follows on from Reusing Online Resources: A Sustainable Approach to E-learning. At that time focus was on the creation, release and reuse of digital learning resources modeled on educational materials. Since then the open release of resources and data has become mainstream, rather than specialist, changing societal expectations around resource reuse. Social and professional learning networks are now routine places for the exchange of online knowledge resources that are shared, manipulated and reused in new ways, opening opportunities for new models of business, research and learning. The goal of this book is to extend the debate of how open, online resources might support learning across diverse contexts. Twenty-four distinguished experts from nine countries distributed across Europe and North America contribute empirical evidence and ideas. Collectively they provide a vision of the potential of open, online resources to support learning across everyday contexts of education, work and life.

Surveillance, early detection, control and eradication of notifiable animal diseases is of critical importance for countries in order to maintain or improve their animal health status. This requires the collaboration of all stakeholders involved including animal health authorities, livestock industry and veterinary research institutions among others. Prevention, control and eradication programs must take into account the characteristics of the host (including potential reservoirs), the pathogen (transmissibility, virulence...) and the environment (temperature, animal density...) but also the socio-economic context in which they have to be implemented (highly influenced by funding availability), while at the same time guaranteeing compliance with international trade regulations. This has led to the adoption of a wide range of approaches to address the risk posed by specific pathogens in different countries, and at the same time similar strategies have yielded very different results in different regions. This Research Topic includes a variety of manuscripts focusing on different aspects of surveillance, control and eradication of diseases of critical importance for livestock, including cattle, swine and wildlife, in an attempt to provide an overview of the current situation in different countries.

Dairy cow herd health is an important and universal topic in large animal veterinary practice and farming, covering both preventive medicine and health promotion. With the move towards large scale farming, the health of the herd is important as an economic unit and to promote the health of the individuals within it. This book will focus on diseases within herds, herd husbandry practices, youngstock management and environmental issues. Major diseases and conditions will be covered such as mastitis, lameness, nutrition, metabolic and common infectious diseases from a herd health perspective.

'Climate Change Perception and Changing Agents in Africa & South Asia' presents first-hand experiences of climate change perception. Now more than ever understanding public perceptions of climate change is fundamental in creating effective climate policies, especially within countries that are particularly vulnerable to climate change. Striving to present a comprehensive study of climate perception in Africa and South Asia, this volume presents seven in-depth case studies from Cameroon, the Eastern Himalayas, Kenya, Nepal, and Zimbabwe. In order to combat climate change, effective communication is essential in order to educate, persuade, warn and mobilize the masses. Therefore, climate change communication is shaped not only by our different experiences and beliefs but also by the underlying cultural and politic values of a country. Within this volume, climate change communication is examined from Cameroonian, Kenyan and Zimbabwean perspectives. From the role of stakeholders to practical field experiences, the individual case studies present an interesting and informative portrait of climate change communication. It is often the poorest and most vulnerable people who are most affected by the impacts of climate change. Therefore, community-based adaptation is an approach that is aimed at empowering communities in the process of planning for and coping with climate change. In this book, this progressive and innovative approach is examined from a grass-roots perspective that looks to both the Eastern Himalayas and Zimbabwe. Readers are presented with case-studies that investigate the importance of indigenous knowledge, community-based research and the role of social workers in climate change mitigation. This high-quality resource puts forward a well-informed and accessible discussion of climate change perception that will be of interest to both students and scholars, alike.
