"This book explores the value of information and its management by highlighting theoretical and empirical approaches in the economics of information systems, providing insight into how information systems can generate economic value for businesses and consumers"--Provided by publisher.

The updated, real-world guide to interpreting and unpacking GAAP and non-GAAP financial statements In Financial Statement Analysis, 5th Edition, leading investment authority Martin Fridson returns with Fernando Alvarez to provide the analytical framework you need to scrutinize financial statements, whether you're evaluating a company's stock price or determining valuations for a merger or acquisition. Rather than taking financial statements at face value, you'll learn practical and straightforward analytical techniques for uncovering the reality behind the numbers. This fully revised and up-to-date 5th Edition offers fresh information that will help you to evaluate financial statements in today's volatile markets and uncertain economy. The declining connection between GAAP earnings and stock prices has introduced a need to discriminate between instructive and misleading non-GAAP alternatives. This book integrates the alternatives and provides guidance on understanding the extent to which non-GAAP reports, particularly from US companies, may be biased. Understanding financial statements is an essential skill for business professionals and investors. Most books on the subject proceed from the questionable premise that companies' objective is to present a true picture of their financial condition. A safer assumption is that they seek to minimize the cost of raising capital by portraying themselves in the most favorable light possible. Financial Statement Analysis teaches readers the tricks that companies use to mislead, so readers can more clearly interpret statements. Learn how to read and understand financial statements prepared according to GAAP and non-GAAP standards Compare CFROI, EVA, Valens, and other non-GAAP methodologies to determine how accurate companies' reports are Improve your business decision making, stock valuations, or merger and acquisition strategy Develop the essential skill of quickly and accurately gathering and assessing information from financial statements of all types Professional analysts, investors, and students will gain valuable knowledge from this updated edition of the popular guide. Filled with real-life examples and expert advice, Financial Statement Analysis, 5th Edition, will help you interpret and

unpack financial statements.

Keynes established that both the short-run and long-run performance of a capitalist system depend upon investment, but he failed to arrive at an alternative to the neoclassical theory of investment. Professor Gordon demonstrates that the extension of neoclassical theory to deal with uncertainty and risk aversion is based upon a string of assumptions which are empirically false. The competitive stationary state, the foundation for the neoclassical theory of a capitalist system, is shown to be unfeasible because it results in a very high probability of bankruptcy at the micro level and the system's early collapse on the macro level. Capitalists seeking long-term survival are shown to be subject to a growth impreative, to the pursuit of monopoly power, and to a concern for financial policy. Later sections of the book discuss the consequences of this behaviour for the short-run fluctuations and the long-run development of capitalist systems. This innovative book advances new theory of finance and investment which recognizes the problem of bankruptcy when the future is uncertain. It will be welcomed by both post Keynesian and neoclassical economists as a significant contribution to current economic understanding.

The Detective's Handbook details the vital information law enforcement officers need to know to become better detectives. Since all essential aspects of detective work cannot be covered in a single volume, the editors have selected 20 of the most critical issues detectives face in their day-to-day work and present them in separate chapters. Using a unique format and style, this essential handbook draws on the expertise of contributors with police and academic backgrounds to provide both new and seasoned detectives with invaluable insights. It covers a wide range of detective procedures and practices employed in the United States and can be read as a whole or used as a reference for conducting various types of investigations and interrogations. The book highlights common mistakes and outlines best practices to help readers avoid making the same mistakes in the field. It provides the tools and understanding to conduct the range of investigations that today's detectives will most likely have to conduct, including those involving sexual predators, healthcare and financial fraud, cyber crime, gangs, cults, personal violence, and property. The text concludes with a section on all-purpose practices and lessons for investigations. In this section, readers will learn the practical aspects of interviewing and interrogating witnesses, including how to interview and communicate with special populations, such as those with mental and physical disabilities. Sharing the most effective investigative practices and procedures in use today, this book is a must-have for police, sheriffs, and other government agencies that are responsible for protecting the public.

The Bulletin of the Atomic Scientists is the premier public resource on scientific and technological developments that impact global security. Founded by Manhattan Project Scientists, the Bulletin's iconic "Doomsday Clock" stimulates solutions for a safer world.

In his study of Golden Age and hard-boiled detective fiction from 1890 to 1950, Yan Zi-Ling argues that these two subgenres can be distinguished not only by theme and style, but by the way they structure knowledge, value, and productive labour. Using the detective as a reference point and enactor of socially based interests, Yan shows that Golden Age texts are distinguished by their conservatism (and not only by their conservatism), with the detectives' actions serving to stabilize institutions with specific ideological aims. In contrast, the criminal investigations of the hard-boiled detective, who is poorly aligned with institutions and strong interest groups, reveal the fragility of the status quo in the face of escalating cycles of violence. Key to Yan's discussion are theories of exchange, value, and the gift, the latter of which he suggests is more akin to detective work than is wage labour. Analyzing texts by a wide range of authors that includes Arthur Conan Doyle, Agatha Christie, Dashiell Hammett, Raymond Chandler, Dorothy Sayers, Raoul Whitfield, George Harmon Coxe, and Mickey Spillane, Yan demonstrates that the detective's truth-generating function, most often characterized as a process of discovery rather than creation, is in fact crucial to the institutional and class-based interests that he or she serves.

Freud's 1927 essay on the acquisition of a screen memory, or fetish, allows the subject to come to terms with the traumatic truth that, for him, dominates the present moment (in Freud's scenario, the truth of mother's sexuality) by maintaining, alongside and not in place of it, a parallel story of the past (the myth of the phallic mother). In this book Freud's theory of the fetish, and in particular this way of allowing two opposed and ostensibly mutually exclusive narratives to co-exist, is used to provide a number of Parisian crime texts with radical new solutions. The fetishistic world-view of Charles Baudelaire's poetics will be shown to provide the template for all overvalued instances of women passing by; notably, it will be seen how the famous assault on one of Christian Dior's models as she displayed the New Look for the first time in Montmartre in 1947 depends on a fetish erected in the poem "À une passante". The same Paris streets allow red herrings to be raised to the status of truth in novels by Fred Vargas, Léo Malet and Frédéric Cathala. In these texts the discovery of a primal scene allows doubt to be cast over authorial solutions and new murderers or victims to be found. In the case of Jean-Paul Sartre's *La Nausée*, the fetishism at work is shown to have harboured a serial killer where no crime was previously considered to have taken place. In these analyses, fetishism is mapped onto prose poetics, intertextuality and deconstruction in order to challenge the way we read text. More importantly, rereading these texts allows us to see fetishism in a new light as a force for positive, creative acts of meaning-making. Alistair Rolls is Associate Professor of French Studies at the University of Newcastle, Australia. He is the author of *The Flight of the Angels: Intertextuality in Four Novels by Boris Vian* (Rodopi, 1999) and, with Deborah Walker, of *French and American Noir: Dark Crossings* (Palgrave

Macmillan, 2009).

Case Studies in Finance links managerial decisions to capital markets and the expectations of investors. At the core of almost all of the cases is a valuation task that requires students to look to financial markets for guidance in resolving the case problem. The focus on value helps managers understand the impact of the firm on the world around it. These cases also invite students to apply modern information technology to the analysis of managerial decisions. The cases may be taught in many different combinations. The eight-part sequence indicated by the table of contents relates to course designs used at the authors' schools. Each part of the casebook suggests a concept module, with a particular orientation.
