Kwikstage Access - RMD Kwikform - PDF Catalogs | Technical ...

George Roberts Kwikstage Scaffolding is a well established scaffolding system distributed throughout the world. Its adaptability and speed of erection enables it to be used for a wide range of applications ranging from house building to large industrial applications. With the virtual elimination of loose fittings, losses are minimal.

Scaffolding is used in many industries every day, all over the world, in the construction industry; for commercial and industrial maintenance; the staging and entertainment markets; the shipbuilding industry; mining; industrial plants, including power plants; hydro and nuclear power facilities; pulp and paper plants; petrochemical plants; oil refineries; and offshore drilling rigs. This book serves as a guide to any person involved with scaffolding in any way so that they will have a training and reference book that they can refer to for both scaffolding product knowledge and for estimating. The first ten chapters of this book include historical data and background information including product knowledge on all types of built-up scaffolding, suspended cradles, and swingstages. The eleventh chapter of this book is dedicated to the procedures that are used for estimating; preparing proposals, bids, and contracts, including systematic instructions on how to calculate the formulas that are most commonly used for estimating materials and labour outputs for scaffolding. Additionally, there are several sections of this book dedicated to temporary enclosures, built-up shoring and falsework, as well as manual and motorized suspended swingstages and cradles. There are very few books available on these topics. To my knowledge there are none dedicated to product knowledge and the estimating of built-up scaffolding systems. No book can be all-inclusive, and this handbook does not claim to be. Much time and research has been put into this book to ensure that as many of the proven estimating methods and design concepts for all types of built-up and suspended scaffolding have been covered. Since one of our greatest assets in any business are our employees, the proper training of all craft and support staff within an industry is of primary importance. Additionally, the continuity in the training given to staff should always be kept up to a measurable standard and continually maintained to an acceptable level.

New tradies learn to stay safe with comprehensive coverage of the technical and regulatory changes that students and teachers need to know about working safely at heights, on scaffolding and elevated work platforms, and with powder-actuated tools. Construction Skills 2e is designed for easy student learning with end-of-chapter worksheets, explanation and definition of terms, coverage of regulation and codes, real-world examples and practical demonstrations. The author covers core units and important safety areas from Certificate III in Carpentry/Carpentry and Joinery, Certificate III in Plumbing and across the trades. Written to competency units: - CPCCCM2010: Work safely on scaffolding higher than two metres - CPCPCM2055A: Work safely on roofs - CPCCCM2007B: Use explosive power tools - CPCCCM3001: Operate elevated work platforms up to 11 metres - CPCCCM2008B: Erect and dismantle restricted height scaffolding The bestselling Building Skills series addresses the key competencies of the Certificate III in Carpentry. Series titles are built for learning with colour photographs and illustrations, online tools, and concepts explored in context to help student understanding. Work Health and Safety (WHS) icons identify critical points for concern and student activities help them apply the knowledge and skills. The Worksheets at the end of each chapter are a resource for teachers and trainers to provide formative assessment and feedback on learner progression.
