A comprehensive overview of the research, theory, application and current practices in the field of psychology for medicine and healthcare, covering topics from epigenetics to social determinants of health and transdiagnostic approaches to mental health and everything in between.

When a local context really makes the difference... The new edition of this original Australian text continues to offer the most balanced coverage of theory and research for Australian students and educators and appeals to students from many backgrounds. It covers the domains of development including neurological, cognitive, social, physical and personality. The text is organised chronologically by chapter. Within each chapter content is organised topically. This structure allows for a degree of flexibility and lecturers can choose the way they wish to approach the content, whether it is topically or chronologically.
