The concept of Microeconomics revolves around the behaviour of market. The answers of questions such as, how prices are determined and what leads to change in the prices so determined provide the subject matter of microeconomics. This book is an effort to bring together all the related topics in a careful manner. The book provides an extensive approach towards the concepts of demand and supply, product pricing, elasticity of demand and supply, marginal utility, etc. The book is divided into twelve chapters. It has been developed keeping in view the requirements of graduate level students, as the book covers the syllabus of microeconomics, as prescribed for the BCom (Hons) I year course of the University of Delhi. The book is written with the objective to supplement the classroom teaching. It has been written in a manner as if lectures are being delivered.
