Designed to accompany Microelectronic Circuits by Adel S. Sedra and Kenneth C. Smith, Laboratory Explorations invites students to explore the realm of real-world engineering through practical, hands-on experiments. Taking a "learn-by-doing" approach, it presents labs that focus on the development of practical engineering skills and design practices. Experiments start from concepts and hand analysis, and include simulation, measurement, and post-measurement discussion components. A complete solutions manual is available to adopting instructors.

This is the third edition of the European Workshop on Microelectronics Education (EWME). A steady-state regime has now been reached. An international community of university teachers is constituted; they exchange their experience and their pedagogical tools. They discuss the best ways to transfer the rapidly changing techniques to their students, and to introduce them to the new physical and mathematical concepts and models for the innovative techniques, devices, circuits and design methods. The number of abstracts submitted to EWME 2000 (about one hundred) enabled the scientific committee to proceed to a clear selection. EWME is a European meeting. Indeed, authors from 20 different European countries contribute to this volume. Nevertheless, the participation of authors from Brazil, Canada, China, New Zealand, and USA, shows that the workshop gradually attains an international dimension. The 20 century can be characterized as the "century of electron". The electron, as an elementary particle, was discovered by J.J. Thomson in 1897, and was rapidly used to transfer energy and information. Thanks to electron, universe
