Astronomy Methods is an introduction to basic practical tools, methods and phenomena that underlie quantitative astronomy. Taking a technical approach, the author covers a rich diversity of topics across all branches of astronomy, from radio to gamma-ray wavelengths. Clear, systematic presentations of the topics are accompanied by diagrams and problem sets. Written for undergraduates and graduate students, this book contains a wealth of information that is required for the practice and study of quantitative and analytical astronomy and astrophysics.

"I loved this book! So helpful!" -- Courtney Milan, New York Times Best Selling author of The Governess Affair "Have you ever wanted to double your daily word counts? Do you feel like you're crawling through your story, struggling for each paragraph? Would you like to get more words every day without increasing the time you spend writing or sacrificing quality? It's not impossible, it's not even that hard. This is the story of how, with a few simple changes, I boosted my daily writing from 2000 words to over 10k a day, and how you can, too." Expanding on her highly successful process for doubling daily word counts, this book--a combination of reworked blog posts and new material--offers practical writing advice for anyone who's ever longed to increase their daily writing output. In addition to updated information for Rache!s popular 2k to 10k writing efficiency process, 5 step plotting method, and easy editing tips, this new book includes chapters on creating characters that write their own stories, story structure, and learning to love your daily writing. Full of easy to follow, practical advice from a commercial author who doesn't eat if she doesn't produce good books on a regular basis, 2k to 10k focuses not just on writing faster, but writing better, and having more fun while you do it. \*New for Fall 2013! This Revised Edition includes updates and corrections for all chapters!\*

Classic telescopes are of interest to amateur astronomers for a variety of reasons. There are the dedicated collectors, but there are also many amateurs who love the nostalgia they inspire. These telescopes "feel" different from any contemporary telescope and perhaps have a unique ability to reconnect the owner to a bygone age of craftsmanship. This book takes a look at traditional telescopes built by the great instrument makers of the 18th and 19th centuries, particularly the dynastic telescope makers, including Dollond, Alvan Clark, Thomas Cooke & Sons, and Carl Zeiss. Also included are lesser luminaries such as John Brashear, John Calver, William Wray, Henry Fitz, and William Henry MogeY. 'Classic Telescopes' covers the key features of the telescopes designed by these manufacturers, and shows how a heady combination of market trends, instrument condition, and pedigree will dictate their prices at auction. 'Classic Telescopes' also shows the reader how to find real bargains! Interviews with top classic telescope collectors (and users) provide the best tips of prospecting for a genuine acquisition.

Michael Swanson's online discussions with literally thousands of NexStar owners made it clear that there was a desperate need for a book such as this – one that provides a complete, detailed guide to buying, using and maintaining NexStar telescopes. Although this book is highly comprehensive, it is suitable for beginners – there is a chapter on "Astronomy Basics" – and experts alike. Celestron's NexStar telescopes were introduced in 1999, beginning with their first computer controlled "go to" model, a 5-inch. More models appeared in quick succession, and Celestron's new range made it one of the two dominant manufacturers of affordable "go to" telescopes.
