These aren't your momma's shapeshifters… Marine Roane Weston and his team—Circe's Recruits—have been fighting the good fight for the past three years, since Project Dawn disbanded. They clean up after a ruthless millionaire's experiments, hunting down men who've turned into beasts. Because like those creatures, Circe's Recruits have been genetically altered, able to take on a form neither man nor animal, but something in between. The rogue Circs they hunt have all been insane. And male. But a female rogue, the first of her kind, takes Roane and his team by surprise. And for some reason he can't get her out of his mind... Warning: This book contains sexual content readers may find fascinating: group play, m/m, m/f, m/m/f and more. For more than a century, from 1900 to 2006, campaigns of nonviolent resistance were more than twice as effective as their violent counterparts in achieving their stated goals. By attracting impressive support from citizens, whose activism takes the form of protests, boycotts, civil disobedience, and other forms of nonviolent noncooperation, these efforts help separate regimes from their main sources of power and produce remarkable results, even in Iran, Burma, the Philippines, and the Palestinian Territories. Combining statistical analysis with case studies of specific countries and territories, Erica Chenoweth and Maria J. Stephan detail the factors enabling such campaigns to succeed and, sometimes, causing them to fail. They find that nonviolent resistance presents fewer obstacles to moral and physical involvement and commitment, and that higher levels of participation contribute to enhanced resilience, greater opportunities for tactical innovation and civic disruption (and therefore less incentive for a regime to maintain its status quo), and shifts in loyalty among opponents' erstwhile supporters, including members of the military establishment. Chenoweth and Stephan conclude that successful nonviolent resistance ushers in more durable and internally peaceful democracies, which are less likely to regress into civil war. Presenting a rich, evidentiary argument, they originally and systematically compare violent and nonviolent outcomes in different historical periods and geographical contexts, debunking the myth that violence occurs because of structural and environmental factors and that it is necessary to achieve certain political goals. Instead, the authors discover, violent insurgency is rarely justifiable on strategic grounds.

In A Major Attraction, Major Kyle Waters returns from a deployment and wakes up with his arms full of Olivia Cava—the woman he's been fantasizing about for months. But will his past resurrect issues of jealousy and ruin their growing love? In A Major Seduction, Maria Thompson has been after her best friend's older brother since she first knew boys existed. And in A Major Distraction, Major Brad Cava accidentally put on a sexy show for his neighbor-the gorgeous-and annoying-Genevieve, a civilian he's forced to work with. The show flames the sparks already between them, and soon he's falling in love. Then rumors at work breach their fragile trust. Will Brad believe in love, or succumb to his past and believe in the lies?

This report considers the biological and behavioral mechanisms that may underlie the pathogenicity of tobacco smoke. Many Surgeon General's reports have considered research findings on mechanisms in assessing the biological plausibility of associations observed in epidemiologic studies. Mechanisms of disease are important because they may provide plausibility, which is one of the guideline criteria for assessing evidence on causation. This report specifically reviews the evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke. This evidence is relevant to understanding how smoking causes disease, to identifying those who may be particularly susceptible, and to assessing the potential risks of tobacco products.
