Structured dialog :The dialog between the consultant and the users should be based on the structure of this book.

# Read PDF Sap Mm Qm

The consultant would demonstrate a business transaction, e.g. goods receipt, in its simplest form. He would then explain the data items on the screens, their meaning and significance. He would enquire whether the data item is relevant for the client company. The data items that are not relevant can be hidden

# Read PDF Sap Mm Qm

in the implementation, and related configuration marked as not required. When the consultant would come to a section explaining IMG node, his questions to the user would be designed to collect the information required to configure that node.

Prototyping :As the structured dialog continues, the consultant

# Read PDF Sap Mm Qm

would go on doing the configuration. By the end of the dialog, the consultant would have built a company-specific prototype. Training and trials :The prototype would be a rough-cut implementation of SAP for the company. It would be used for training the users. After training, the users would try out the system. They

# Read PDF Sap Mm Qm

would perform routine transactions several times using real-life data of their company. They would try different scenarios and record their observations.

Refinement :After prototype trials, the consultant and the users would sit together to discuss what the users required to do, but could not do with the

prototype. The consultant would use this input to refine the prototype and to build new functionality, if needed. Configuration manual :The documentation of SAP implementation includes a configuration manual. This configuration manual should be structured on the lines of this book as

explained in Chapter 34.

Such a configuration manual will be easy to understand as it groups logically related elements together. User manual :This book will serve as a generic user manual. Company-specific user manual can also be structured on the lines of this book including only company-specific guidelines for

Since most of the book

has been written in standard SAP, once a company code is set up along with some basic configurations defined in the first few pages, a SAP user, if so desires, can stay only with the areas marked 'U' by passing the 'C' since not everything in standard SAP depends on configurations.

Consultants or to-be

consultants, of course, need to understand both sides of SAP. The effects of changes done in configuration are immediately followed by their effect on the transactions, thereby making the learning relational in real time for better understanding. From the user's perspective, not much from the subject has

been left out in writing this manual and every effort has been taken to keep it relevant to the execution of order processing and logistics functions of day to day working on SAP in an orderly flow. This manual is really a result of many years of training both consultants, and business users. The
