Online Library Study Guide

Darwins Theory Of

Evolution

Evolution is a change in the characteristics of a population of organisms over time.

The theory of evolution explains how the diversity of life on Earth has arisen.

Evolution is supported by a wide range of evidence, including fossils, comparative anatomy, and molecular biology.

The theory of evolution is a central concept in modern biology.

Evolution is a change in the characteristics of a population of organisms over time.

The theory of evolution explains how the diversity of life on Earth has arisen.

Evolution is supported by a wide range of evidence, including fossils, comparative anatomy, and molecular biology.

Online Library Study Guide

Darwins Theory Of

Evolution

Evolution is the change in the characteristics of a population of organisms over time. The theory of evolution, first proposed by Charles Darwin, explains how these changes occur through the process of natural selection. Darwin's theory is based on the idea that organisms with traits that are better suited to their environment are more likely to survive and reproduce, passing on those traits to their offspring. Over time, this process can lead to the development of new species and the extinction of others.
