This book features 13 Japanese entrepreneurs who made a significant contribution to the development of society from 1868, when modernization in Japan began, to the 1950s, after World War II. They worked on solving social issues at the time through their businesses and succeeded in creating social value by solving social issues and economic value through the development of their businesses. The business philosophies they practiced have been passed on to their successors, and the companies they founded are now providing value to consumers around the world. Those 13 entrepreneurs anticipated the integration of solving social issues into corporate management, which modern companies are expected to realize under the umbrella of the Sustainable Development Goals (SDGs) adopted by United Nations in 2015. Their trajectories provide a wealth of practical knowledge necessary to survive in a changing society and provide many valuable lessons for modern companies and their managers.

Various combinations of commercially available technologies could greatly reduce fuel consumption in passenger cars, sport-utility vehicles, minivans, and other light-duty vehicles without compromising vehicle performance or safety. Assessment of Technologies for Improving Light Duty Vehicle Fuel Economy estimates the potential fuel savings and costs to consumers of available technology combinations for three types of engines: spark-ignition gasoline, compression-ignition diesel, and hybrid. According to its estimates, adopting the full combination of improved technologies in medium and large cars and pickup trucks with spark-ignition engines could reduce fuel consumption by 29 percent at an additional cost of \$2,200 to the consumer. Replacing spark-ignition engines with diesel engines and components would yield fuel savings of about 37 percent at an added cost of approximately \$5,900 per vehicle, and replacing spark-ignition engines with hybrid engines and components would reduce fuel consumption by 43 percent at an increase of \$6,000 per vehicle. The book focuses on fuel consumption--the amount of fuel consumed in a given driving distance--because energy savings are directly related to the amount of fuel used. In contrast, fuel economy measures how far a vehicle will travel with a gallon of fuel. Because fuel consumption data indicate money saved on fuel purchases and reductions in carbon dioxide emissions, the book finds that vehicle stickers should provide consumers with fuel consumption data in addition to fuel economy information.
